

# BlackBerry Desktop

ENABLE SECURE REMOTE CONNECTIVITY FROM ANY  
WINDOWS 10 OR MACOS DEVICE

## **Maximized Productivity. Reduced Costs. Unparalleled Security.**

With BlackBerry Desktop, you can give your users **secure access to email, corporate websites, servers, content, and files** on their personal or non-corporate managed Windows 10 and macOS devices. You can simply bring-your-own-computer (BYOC) programs in your organization, and extend productivity to both traditional and non-traditional employees – including contractors, remote workers, and external partners.

We can also help you **save on hardware, software, provisioning, and help desk costs** for your enterprise. You can integrate BlackBerry Desktop easily with your existing Microsoft Office on-prem or Microsoft 365 investments. Our solutions enable complete business productivity across endpoints to all your users, **without the need for VPN or VDI, complex hardware, certificates and authentication, or complicated sign-in procedures.**

## **Simple Onboarding and Offboarding**

BlackBerry Desktop enables the modern enterprise to reach more endpoints by providing a turnkey way to quickly onboard or offboard contractors, partners, non-employees, and home workers.

Provisioning any user is simple. IT can onboard any user by providing a simple access key. After activation, the user can then access all corporate resources with a single sign-on on to BlackBerry Apps on their computer, separate from their personal apps. IT can also easily wipe all corporate data from the device, such as at the end of a contract or in the event of an emergency – without having to worry about a complex enrollment and deprovisioning process.

## **Full Business Productivity from Non-Corporate Managed Computers and Tablets**

Users can securely work with their corporate tools and cloud apps anytime, from any device of their choice. Best of all, they have the same set of capabilities that they would have with a traditional corporate-owned and managed computer.

**Email:** Effortlessly create business emails with the ability to accept/decline meeting invites from the inbox, **compose rich emails, perform spell checks.**

**Calendar:** Easily manage business calendar and utilize the free/busy lookup capability to align with everyone's schedules.

**Documents:** While online, download or open files, edit them straight from the secure browser – **offline with built in secure document editor and online with office web apps**, and email them to colleagues.

**Contacts:** Reach any of your corporate Active Directory contacts with ease. Contacts History and GAL information all with a single click.

**Office 365 Apps:** Work with your Microsoft® Office 365® apps online so you can always collaborate with the right business tools.

**Intranet Websites:** Access intranet sites and manage bookmarks, history, and downloads so that content is always within reach.

**Cloud-Based Business Apps:** Easily access file-based apps, dashboards, reporting tools, and more such as Salesforce.com, Workday, Expensify, SuccessFactors, Bloomberg, etc.

# Easy Access PIM From Any Device Anywhere

Users can collaborate freely with business-focused capabilities:

- Read, send, and manage emails
- Schedule and open meetings from their business calendar
- View contact lists
- And more!

# Work Online/Offline with MS Office 365 Applications

Users can easily access and edit their Microsoft Office 365 apps by seamlessly connecting to on-prem or cloud resources.

With just a couple of clicks, users can collaborate with:

- Microsoft Outlook: Email, calendar, contacts, tasks, and notes
- Content repositories: Microsoft SharePoint, OneDrive, and more
- Full Online and Offline Document Editing: Create and edit Microsoft Word, Microsoft Excel, and Microsoft PowerPoint files, and share them with colleagues

With BlackBerry Desktop, users can collaborate on email, calendar, and contacts, and securely edit Microsoft PowerPoint and Microsoft Word documents without depending on Wi-Fi, using an embedded editor (SmartOffice by Artifex). Using this functionality, they can download, edit, and save Word and PowerPoint documents in the secure enclave of the BlackBerry® desktop app and be assured that their data remains secure.

### Securely Collaborate on Corporate Websites

Users can securely enter and collaborate on corporate web apps. This gives users easy-to-access business resources such as internal portals, HR resources, and dashboards. By providing one-click access to these apps, users will have all resources at hand without limitations on discoverability or security.

Enterprises can configure Chromium extensions so that users can stay even more productive with the most commonly-used corporate applications, such as web conferencing, sales reporting (i.e. Salesforce), project management, and more.

# BlackBerry Digital Workplace A Unified Workspace with Awingu

**Awingu.com**  
One Workspace. Any Device. Anywhere.

**Lightweight & Simple**

**Optimal Security and UX, Combined**

**Any App, Desktop & File on Any Device, Anywhere**

**Offline & Online**

**Optimal TCO**

### **Rich Policy and Access Controls for IT**

IT can easily manage policy and access controls. IT can set up policies to ensure security, such as:

- “Whitelist” approved domains so that users can access corporate pages without compromising data
- Set different browser and app policies for different user groups
- Support server certificates and persistent credentials
- Enable strict tunneling or flexible traffic control

### **End-to-End Security with Data Path Controls**

With traditional browsing, sensitive corporate data such as bookmarks, NTLM credentials or files may be exposed. BlackBerry Access uses Data Path Controls to securely route traffic thru the firewall, and at the same time keeps intranet and any SaaS data secure and containerized. Organizations can enable seamless connections for remote users to sensitive data sources while eliminating data leakage.

### **Three Easy Steps to Deploy**

- IT deploys the application to users. Existing BlackBerry Dynamics infrastructure supporting iOS and Android can be seamlessly leveraged for supporting Windows 10 and macOS
- Users download the app on their Windows 10 or macOS device from [www.blackberry.com/mobilityapps](http://www.blackberry.com/mobilityapps), and enter the access key to activate the app.
- With a single sign-on, users will now be able to access corporate intranet and business apps anytime, anywhere.

And when an employee leaves the company, IT can remotely wipe the BlackBerry Access app data from the user’s laptop. The corporate data is now removed from the desktop while the user’s personal data remains untouched.
